# Premium Products & Solutions

## At Competitive Prices!

Floor care is a critical component in almost every location, whether it's carpet, wood, composite or tile flooring. High footfall inevitably leads to the smoothing of surfaces, accumulation of dust, dirt, and other allergens. All of which can contribute to safety issues, disrupting workflow and building aesthetics.

The appearance of the floor is important, but at Western Hygiene the topic of safety takes precedence. Floors that have been worn down or not properly tended to, can pose a serious safety hazard. As experts in our field, we understand what chemicals to use and when to use them, engaging with our customers on all facets of floorcare - from when a floor should be waxed, stripped, frequency of cleaning and much more!

Remember, floors have the potential to set the tone for an individual upon entry into a building - generating a sense of trust in the facility, safety and ease!
